

INTERCHANGEABLE FILTER ELEMENTS for COMPRESSED AIR and VACUUM

WHY ?

As expert in manufacturing filtration equipment, **ETHAFILTER** offer through quick distribution service a broad range of *high efficiency* compressed air and vacuum filter elements proposed as an *up-grading* alternative in replacement of the original ones.

An exhaustive service by 360°

Up-most performance

Each element is designed for excelling in performance by offering certified values for suiting the quality classes of the **ISO 8573.1** (2001 ed.): this is your assurance that the elements meet the stringent specification of the original Manufacturer's.

Complete coverage

In **one source only**, you have available all cross references from A to Z in the **easiest way to identify**. In case of doubt on parts, price and delivery, our **competent knowledge** is on hand for readily supporting your queries in the **major languages**.

✓good communication

Appealing price

Filter element changes are essential: with this in mind **total quality at the right cost** is offered by **competitively priced** elements for maximising the convenience.

Top quality

Commitment to excellence is of paramount importance when conceiving the product through thorough research. Synthetic endcaps materials, stainless steel cylinders, ultra pure potting resin, resistant drain sock are provided as standard for perfect operational efficiency.

✓reliability

Durability

Specially blended borosilicate glass microfibre media with $\geq 96\%$ voids provide exceptional dirt holding for long life performance along with minimal Δp characteristics that reduce running costs to an absolute minimum.

Customer's satisfaction

All our filters provide advanced technology and continue to become increasingly adopted by **Service Engineers**, as well as many **OEM Partners** for severe applications.

✓competence

INNOVATIVE CLEAN TECHNOLOGY

Dynamic delivery system

For most popular sizes and grades, Customers are backed up by a capillary network of Import Dealers and local Distributors.

By maintaining key components at stock, we ensure speedy deliveries even for making peculiar elements.

VACUUM PUMPS		high efficiency exhaust separator elements
<p>Also built as first equipment for OEM's, these elements have been recently improved by joint development of proprietary new borosilicate glass fibre media as well as a new coalescer outer drainage sock. Intensive long term testing have been demonstrating lower back pressure, thus reducing operating temperature which, as a result, conciliate exceptionally low oil carry-over over long life cycle time.</p>
